

exposed and a closed position in which the at least one receptacle is concealed, wherein the movable receptacle member and the base member are configured such that the upwardly facing stationary receptacle of the base member and the at least one receptacle of the movable receptacle member are laterally offset from each other;

c) a biasing member disposed on the receptacle member and engaged with the base member to bias the receptacle member toward the open position; and

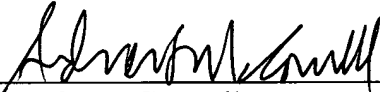

d) a cover member carried by the receptacle member, wherein the cover member extends laterally from the receptacle member and is configured to overlie and conceal the upwardly facing stationary receptacle of the base member when the movable receptacle member is in the closed position.

REMARKS

The above amendments are made to correct minor matters of language, and do not affect the scope of the claims.

Entry of this amendment is respectfully requested.

Respectfully submitted,

By
